

Route 1 - Costas Garraf

Description

From a perception point of view, this route is challenging due to the combination of many curves, varying gradients, continuous concrete barriers, mountainous terrain and a rather high traffic density. At dusk and dawn, sunlight can blind cameras easily. On the south side, the road has a continuous concrete barrier. On the north side, different road edges can be found such as rock walls (mostly), soil, vegetation, ditches, metallic barriers, concrete barriers and concrete curbs. Road users vary between cars, motorbikes, small trucks and cyclists.

Characteristics

Length	11,9 km
Lane width	3,0 - 4,5 m
